1 Introduction

• Repairs must only be carried out by personnel authorised to do so by the manufacturer.

Interventions and modifications at centrifuges, which have been conducted by persons not authorized by the Andreas Hettich GmbH & Co. KG company, are at their own risk and entail the loss off all guarantee and liability claims. In such an event any guarantee claim or liability claim against the Andreas Hettich GmbH & Co. KG company expire.

 Only original spare parts and original accessories licensed by the Andreas Hettich GmbH & Co. KG company are allowed to be utilised.

If no original spare parts or no original accessories are used, any guarantee claim or liability claim against the Andreas Hettich GmbH & Co. KG company ceases to exist.

- Information about the operation of the centrifuge please see operating instructions.
- We reserve all rights for these technical documents.

2 Symbol meanings

Symbol on the device:

Attention, general hazard area. Before using the device, make sure you read the operating instructions and observe the safety information!

Symbol in this document:

Attention, general hazard area.

This symbol refers to safety relevant warnings and indicates possibly dangerous situations. The non-adherence to these warnings can lead to material damage and injury to personal.

Symbol on the device: Beware of biohazard.

Symbol in this document: Warning! Danger for human lives by electric shock.

Symbol in this document: This symbol refers to important circumstances.

Symbol on the device: The symbol is on the housing, near the hinge. Direction of rotation of the rotor.

Symbol on the device: The symbol is located on the front of the housing, below the borehole. The direction of rotation of the Allen key to unlock the lid in an emergency.

Symbol on the device and in this document:

Symbol for the separate collection of electric and electronic devices according to the guideline 2002/96/EG (WEEE). The device belongs to Group 8 (medical devices).

Applies in the countries of the European Union, as well as in Norway and Switzerland.

3 Disposal

Before disposal, the device must be decontaminated and cleaned to protect people, the environment and property. When you are disposing of the device, the respective statutory rules must be observed.

Pursuant to guideline 2002/96/EC (WEEE), all devices supplied after August 13, 2005 may not be disposed as part of domestic waste. The device belongs to group 8 (medical devices) and is categorized in the business-to-business field.

The icon of the crossed-out trash can shows that the device may not be disposed as part of domestic waste.

The waste disposal guidelines of the individual EC countries might vary. If necessary, contact your supplier.

4 Description of the centrifuge

This microprocessor controlled centrifuge mainly consists of the following components:

- Control panel (A2)
- Electronics (A1)
- Motor (M1) with speed sensor (B1) and holder of the magnet for the imbalance detection
- Motor-driven lid lock (A4)

All electronic components are on mains, except the speed sensor (B1).

4.1 Control panel (A2)

The control panel (A2) have control tasks, it disposes of the following characteristics:

- Keys for input of the operation parameters.
- LCD-display
- Transmission of the signals to the electronics (A1) via the interface.
- Storing the machine version and the brake setting.
 By means of the machine version the electronics (A1) is informed which kind of centrifuge has to be controlled.
 Then the electronics (A1) takes the corresponding values from the ROM, e.g. max. speed, acceleration and deceleration ramps, adjusted value for the imbalance switch-off.
- Communication with the electronics (A1) via TTL interface.
- Monitoring the speed signal and the speed measurement.
- If over or under speed is detected the motor will stop.
- Status indication with a green LED:

Standby:	The LED lights up
Centrifugation run:	The LED flashes slowly
Case of error:	The LED flashes quickly

The power supply for the control panel (A2) is transmitted from the electronics (A1) via the flat ribbon cable: Pin 1 GND Pin 4 +5V

4.2 Electronics (A1)

The electronics (A1) is a combination of:

- Control
- Voltage supply
- Frequency converter

The electronics (A1) carries out the following tasks:

- Power supply 15 V, DC for the speed sensor (B1).
- Power supply 5 V, DC for the control panel (A2).
- Control of the motor:
 - Generating the motor power supply

(three-phase current with variable frequency and voltage)

Functional description: The mains voltage is rectified, smoothened and chopped into a pulse width pattern in three bridge elements with a microprocessor.

- Monitoring the motor current.
- Evaluating the speed sensor pulses (1 pulse per revolution).
- If over or under speed is detected the motor will stop.
- Evaluating the overtemperature switch in the motor (M1).
- Evaluating the imbalance sensor.
 - Controlling the motor-driven lid lock (A4).
- Communication with the control panel (A2) via TTL interface.
- Error evaluation.
- Status indication with a yellow LED:

Standby, centrifugation run:	The LED lights up
Case of error:	The LED flashes with specific errors

4.3 Motor (M1) / Speed sensor (B1)

- The motor is a 2-pole three-phase asynchronous motor (1 pair of poles).
- The motor is protected against overheating by an overtemperature switch. The overtemperature switch is integrated in the motor and cannot be replaced.
- The electronics (A1) evaluates the overtemperature switch.
- The speed sensor (B1, speedometer) is screwed to the bottom of the motor. The speed signal (1 pulse per revolution) will be triggered by a magnet located in the motor axle.
- The electronics (A1) monitors and controls the speed of the motor.
- In addition the speed of the motor is also monitored by the electronics (A2).
- The holder of the magnet for the imbalance detection is attached to the motor.

4.4 Motor-driven lid lock (A4)

- The lid can be opened only if the electronics (A1) has detected rotor standstill.
- After pressing the key $\frac{\text{STOP}}{\text{OPEN}}$ the lid opens motor-driven.
- The centrifugation run can only be started when the lid is closed and the lid lock has locked. A microswitch on the lid lock detects the position of the lid lock (open/closed) and report it to the electronics (A1).

4.5 Imbalance detection

- An hall sensor monitors the imbalance. This hall sensor is located on the electronics (A1).
- The magnet for the imbalance detection is located in a holder which is attached to the motor. The holder is placed in such a way that the magnet is located directly above the hall sensor.
- Imbalance is detected only in running mode (run up, centrifuging and braking).
- If impermissible imbalance is detected, the motor switches off and the rotor slows down braked until it stops.

5 Troubleshooting procedures

- Fuses in installation in which centrifuge is installed are intact.
- Mains input fuses of centrifuge are intact.
- Mains voltage present at (see connecting diagram):
 - EBA 200:
 - Connecting cable
 - Appliance plug/mains switch
 - Electronics (A1), plug S102L and S102N

EBA 200 S, HAEMATOKRIT 200:

- Connecting cable
- Appliance plug/mains switch on the electronics (A3), plug SL1 and SN1
- Electronics (A1), plug S100, pin 1 (L1) and pin 3 (N)
- Look for the displayed error message in chapter 6 on page 8.
- Remedy the error according to the instructions.
- Carry out a functional check after every repair and whenever a component is replaced, see pg. 48, chapter 8.

Error messages 6

Perform a MAINS RESET 6.1

- ٠
- Switch off the mains switch (switch position "0"). Wait for at least 10 seconds and then switch the mains switch back on (switch position "I"). •

6.2 **Brief description**

		No display.	
	4	No display:	10

FC ERROR	61.142	Internal error of the frequency converter on the electronics (A1)	18
IMBALANCE		Imbalance on the motor axis	18
FC ERROR	61.153	Error of the frequency converter on the electronics (A1): Imbalance system is faulty	18

6.3 Error description and remedy

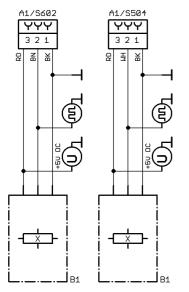

All electronic components are at mains potential with the exception of the speed sensor (B1).

No display

- Error description: No display.
- Cause of error:
 - No mains voltage.
 - Check fuses of in-house installation. Mains input fuses (F1, F2) in the appliance plug are defective. Check the mains input fuses.
 - Mains switch in the appliance plug is defective. Mains voltage measurement: EBA 200: on plugs S102L and S102N / electronics (A1). EBA 200 S, HAEMATOKRIT 200: on plugs SL1 and SN1 / electronics (A3).
 - Electronics (A3) is defective (only for EBA 200 S, HAEMATOKRIT 200).
 - Measurement of the mains voltage on the plug S100 / electronics (A1), Pin 1 (L1) and Pin 3 (N). Electronics (A1) is defective.
 - The yellow LED on the electronics (A1) must be illuminated or flashing.
 - Control panel (A2) is defective.

TACHO ERROR 1, TACHO ERROR 2, **TACHO ERR 61.22, FC ERROR 61.23**

- Error description:
- **TACHO ERROR 1:** During the centrifugation run, the control panel (A2) no longer receives speedometer pulses from the speed sensor (B1).
- TACHO ERROR 2: After starting the centrifugation run, the control panel (A2) receives no speedometer pulses from the speed sensor (B1).

- TACHO ERR 61.22: During the centrifugation run, the electronics (A1) no longer receives speedometer pulses from the speed sensor (B1).

- FC ERROR 61.23: During the centrifugation run, the speed measurement on the electronics (A1) detected an impermissible speed deviation.
- Clear error message:

Wait until the rotor has come to a standstill and the symbol a (lid locked) is displayed. Afterwards, carry out a MAINS RESET.

Cause of error:

- Speed sensor (B1) defective or loose contact. Check the function of the speed sensor (B1); see chapter 7.4.4.

Measurement on plug S602 or S504 / electronics (A1):

Plug S602: EBA 200

Plug S504: EBA 200 S, HAEMATOKRIT 200

Operating voltage: Pin 1 - Pin 3 (+5 VDC).

Speedometer pulses: Pin 1 - Pin 2 (signal). Slowly rotate the rotor by hand.

- Loose contact on the plug S601 or S501 / electronics (A1).
 - Plug S601: EBA 200 R
 - Plug S501: EBA 200 S, HAEMATOKRIT 200
- Control panel (A2) is defective (not with error messages TACHO ERR 61.22 and FC ERROR 61.23).
- Electronics (A1) is defective.

LID ERROR 4.1, LID ERROR 4.127

- Error description: The lid is not locked. The lid lock is not actuated or it jams during locking.
- Clear error message: Carry out a MAINS RESET.
- Cause of error:
 - Lid lock (A4) is defective.
 - Electronics (A1) is defective.

LID ERROR 4.2, LID ERROR 4.3

- Error description: The lid lock is not actuated.
- Clear error message: Carry out a MAINS RESET.
- Cause of error: Electronics (A1) is defective.

LID ERROR 4.4, LID ERROR 4.6, LID ERROR 4.7, LID ERROR 4.9

- Error description: – LID ERROR 4.4: The lid lock jams during locking.
 - LID ERROR 4.6, LID ERROR 4.7, LID ERROR 4.9: The lid lock jams during unlocking.
- Clear error message: Carry out a MAINS RESET.
- Cause of error: Lid lock (A4) is defective.

LID ERROR 4.5, LID ERROR 4.8, LID ERROR 4.126

- Error description: The microswitch in the lid lock opens during the centrifugation run.
- Clear error message: Carry out a MAINS RESET.
- Cause of error:
 - An emergency unlocking is carried out by hand during the centrifugation run.
 - Lid lock (A4) is defective.

LID ERROR 4.10

- Error description: Unknown lid lock type.
- Clear error message: Carry out a MAINS RESET.
- Cause of error:
 - Lid lock (A4) is defective.
 - Control panel (A2) is defective.

OVER SPEED 5

• Error description: Overspeed. The speed measurement function on the control panel (A2) detects an overspeed. Unbraked rundown of the rotor until it comes to a standstill.

Clear error message:

After the rotor has come to a standstill, carry out a MAINS RESET.

- Cause of error:
 - Loose contact on the plug S602 or S504 / electronics (A1).
 Plug S602: EBA 200
 - Plug S504: EBA 200 S, HAEMATOKRIT 200
 - Loose contact on the plug S601 or S501 / electronics (A1).
 Plug S601: EBA 200
 Plug S501: EBA 200 S, HAEMATOKRIT 200
 - Electronics (A1) is defective.
 - Control panel (A2) is defective.

MAINS INTERRUPT, MAINS INTER 11

- Error description: Mains interruption during the centrifugation run.
- Clear error message:

After the rotor has come to a standstill, open the lid and then press the $\frac{\text{START}}{\text{PULSE}}$ key. The error message cannot be cleared with a MAINS RESET.

- Cause of error:
 - Mains voltage failure.
 - Loose contact in the electrical lines.
 - Loose contact on the plug S601 or S501 / electronics (A1).
 - Plug S601: EBA 200
 - Plug S501: EBA 200 S, HAEMATOKRIT 200

VERSION ERROR 12

• Error description:

The centrifuge model and centrifuge type which are saved in the control panel (A2) do not match the electronics (A1).

- Clear error message: Carry out a MAINS RESET.
- Cause of error:
 - An incorrect centrifuge model and incorrect centrifuge type are saved in the control panel (A2).
 In the "SELECT MENU", set the correct centrifuge model and the correct centrifuge type; see chapter 7.4.1.
 - Control panel (A2) is defective.

UNDER SPEED 13

• Error description:

Underspeed. The speed measurement function on the control panel (A2) detects an underspeed. Unbraked rundown of the rotor until it comes to a standstill.

- Clear error message:
 - After the rotor has come to a standstill, carry out a MAINS RESET.
- Cause of error:
 - Loose contact on the plug S602 or S504 / electronics (A1).
 Plug S602: EBA 200
 Plug S504: EBA 200 S, HAEMATOKRIT 200
 - Loose contact on the plug S601 or S501 / electronics (A1).
 Plug S601: EBA 200
 - Plug S501: EBA 200 S, HAEMATOKRIT 200
 - Electronics (A1) is defective.
 - Control panel (A2) is defective.

CTRL ERROR 25.1, CTRL ERROR 25.2, CRC ERROR 27.1

- Error description:
 - CTRL ERROR 25.1, CTRL ERROR 25.2: EEPROM: Read or memory error. The device can no longer be operated.
 - CRC ERROR 27.1: ROM: Read error. The device can no longer be operated.
- Clear error message: Carry out a MAINS RESET.
- **Cause of error:** Control panel (A2) is defective.

COM ERROR 31, COM ERROR 34, COM ERROR 36, FC ERROR 61.17

- Error description: Error in the communication of the control panel (A2) with the frequency converter on the electronics (A1) via the serial interface.
- Clear error message: Carry out a MAINS RESET.
- Cause of error:
 - Loose contact on the plug S601 or S501 / electronics (A1).
 Plug S601: EBA 200
 - Plug S501: EBA 200 S, HAEMATOKRIT 200
 - Overtemperature switch in the motor (M1) is open (only with error message COM ERROR 36). Check the overtemperature switch; see error message FC ERROR 61.5.
 - Electronics (A1) is defective.
 - Control panel (A2) is defective.

FC ERROR 60, FC ERROR 61.16

• Error description:

The enable signal was not correctly transmitted to the frequency converter on the electronics (A1). The device can no longer be operated.

Clear error message:

Carry out a MAINS RESET.

- Cause of error:
 - Loose contact on the plug S601 or S501 / electronics (A1).
 Plug S601: EBA 200
 Plug S501: EBA 200 S, HAEMATOKRIT 200
 - Control panel (A2) is defective.
 - Electronics (A1) is defective.

FC ERROR 61.1

• Error description:

Frequency converter error on the electronics (A1): Undervoltage in the intermediate circuit. Unbraked run-down of the rotor until it comes to a standstill. The device can no longer be operated.

 Clear error message: Carry out a MAINS RESET.

Cause of error:

- Mains voltage too low. For permissible mains voltage, see chapter 12.3.
- Electronics (A3) is defective (only for EBA 200 S, HAEMATOKRIT 200).
 Measurement of the intermediate circuit voltage (approx. 325 V/DC) on pluce
- Measurement of the intermediate circuit voltage (approx. 325 V DC) on plug S100 / electronics (A1), Pin 5 (+) and Pin 7 (Gnd).
- Electronics (A1) is defective.

FC ERROR 61.2

• Error description:

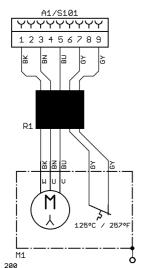

Frequency converter error on the electronics (A1): Overvoltage in the intermediate circuit. The voltage in the intermediate circuit is > 410 V DC. This error usually happens only when braking the motor. Unbraked run-down of the rotor until it comes to a standstill. The device can no longer be operated.

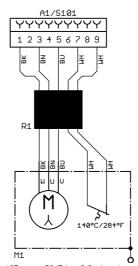

- Clear error message: Carry out a MAINS RESET.
- Cause of error:
 - Mains voltage is too high. For permissible mains voltage, see chapter 12.3.
 - Electronics (A1) is defective.

FC ERROR 61.4

- Error description: Overtemperature in the frequency converter on the electronics (A1). Unbraked run-down of the rotor until it comes to a standstill. The device can no longer be operated.
- Clear error message: Carry out a MAINS RESET.
- Cause of error:
 - The heat dissipation from the frequency converter to the centrifuge housing is insufficient.
 - Full-load operation at an ambient temperature of > 45°C.
 - Electronics (A1) is defective.

FC ERROR 61.5

MIKRO 185 E3656 = 8,3 ohms between 2 motoruires Haematokrit 200 E3713 = 8,3 ohms between 2 motoruires EBA 200 S E3714 = 8,3 ohms between 2 motoruires at cold motor ca. $\pm 15...\pm 320^{\circ}$ C ($\pm 529F...\pm 826^{\circ}$)

EBA 200 230U-motor for all versions 120U and 230U E3304 = 72 ohms between 2 motoruires at cold motor ca. +15...+30°C (+59°F...+86°F)

- Error description: Overtemperature in the motor. The device can no longer be operated.
- Clear error message: Carry out a MAINS RESET.
- Cause of error:
 - The overtemperature switch in the motor opens due to an excessive motor temperature.
 The reset time of the overtemperature switch can take up to 10 minutes.

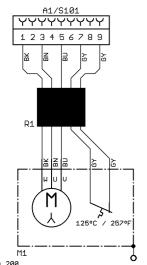

On the electronics (A1) on plug S101, there is a voltage of approx. 325 V DC.

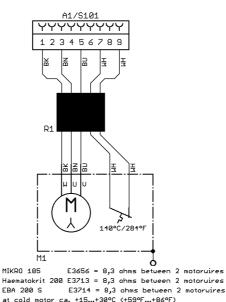

Unplug the plug S101 / electronics (A1) and measure between Pin 7 and Pin 9 on the plug of the cable:

Switch closed: $\approx 0 \Omega$ Switch open (overtemperature): $\propto \Omega$

- The overtemperature switch is built into the motor and cannot be exchanged individually. In the case of a defective overtemperature switch, the motor must be exchanged.
- Loose contact on the plug or S101 / electronics (A1).
- Electronics (A1) is defective.
- Motor is defective.

FC ERROR 61.9, FC ERROR 61.10, FC ERROR 61.13

EBA 200 230U-motor for all versions 120U and 230U E3304 = 72 ohms between 2 motorwires at cold motor ca. +15...+30°C (+59°F...+86°F)

• Error description:

Internal error of the frequency converter on the electronics (A1). The device can no longer be operated.

- Clear error message: Carry out a MAINS RESET.
- Cause of error:
 - Short-circuit in the motor.

On the electronics (A1) on plug S101, there is a voltage of approx. 325 V DC.

Unplug plug S101 and check the winding resistances of the motor at Pin 1, Pin 3 and Pin 5 on the cable plug. For resistance values of the various motors, see the above figure.

- Electronics (A1) is defective.

FC ERROR 61.18

• Error description:

The frequency converter on the electronics (A1) receives an incorrect direction of rotation command The device can no longer be operated.

- Clear error message: Carry out a MAINS RESET.
- Cause of error: Control panel (A2) is defective.

FC ERROR 61.19, FC ERROR 61.20

• Error description:

- FC ERROR 61.19:

The frequency converter on the electronics (A1) detects overspeed Braked run-down of the rotor until it comes to a standstill. The device can no longer be operated.

- FC ERROR 61.20:

The speed measurement of the frequency converter on the electronics (A1) is faulty. Braked run-down of the rotor until it comes to a standstill. The device can no longer be operated.

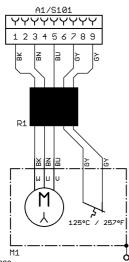

• Clear error message:

Wait until the rotor has come to a standstill and the symbol **a** (lid locked) is displayed. Afterwards, carry out a MAINS RESET.

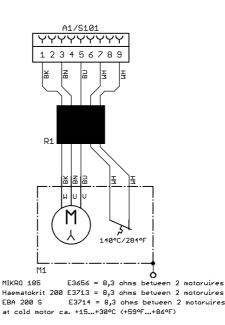

• Cause of error:

- Loose contact on the plug S602 or S504 / electronics (A1).
 - Plug S602: EBA 200
 - Plug S504: EBA 200 S, HAEMATOKRIT 200
- The insulation is damaged on the cable of the speed sensor (B1).
- Loose contact on the plug S601 or S501 / electronics (A1).
 Plug S601: EBA 200
 - Plug S501: EBA 200 S, HAEMATOKRIT 200
- Control panel (A2) is defective.
- Electronics (A1) is defective.

FC ERROR 61.21

EBA 200 230U-motor for all versions 120U and 230U E3304 = 72 ohms between 2 motorwires at cold motor ca. +15...+30°C (+59°F...+86°F)

• Error description:

The frequency converter on the electronics (A1) detects underspeed. Unbraked run-down of the rotor until it comes to a standstill. The device can no longer be operated.

• Clear error message:

Wait until the rotor has come to a standstill and the symbol **a** (lid locked) is displayed. Afterwards, carry out a MAINS RESET.

• Cause of error:

- Motor is sluggish (bearing damage).
- Motor has a winding short-circuit (winding defective).

On the electronics (A1) on plug S101, there is a voltage of approx. 325 V DC.

Unplug plug S101 and check the winding resistances of the motor at Pin 1, Pin 3 and Pin 5 on the cable plug. For resistance values of the various motors, see the above figure.

- Electronics (A1) is defective.
- Loose contact on the plug S602 or S504 / electronics (A1).
 - Plug S602: EBA 200

Plug S504: EBA 200 S, HAEMATOKRIT 200

 FC ERROR 61.64,
 FC ERROR 61.128,

 FC ERROR 61.129,
 FC ERROR 61.131,

 FC ERROR 61.132,
 FC ERROR 61.140,

 FC ERROR 61.141,
 FC ERROR 61.142

- Error description: Internal error of the frequency converter.
- Clear error message: Carry out a MAINS RESET.
- Cause of error: Electronics (A1) is defective.

IMBALANCE

- Error description: An impermissible imbalance was detected. Braked run-down of the rotor until it comes to a standstill.
- Cause of error:
 - The rotor is unevenly loaded.
 - The three rubber/metal bearings on the motor are damaged. Check the three rubber/metal bearings for wear or cracks.
 - The imbalance switch-off is maladjusted. Adjust the imbalance switch-off; see chapter 7.4.2.
 - Electronics (A1) is defective.

FC ERROR 61.153

- Error description: The imbalance system is not in working order.
- Clear error message:
 - Carry out a MAINS RESET.

• Cause of error:

- There is no holder with magnet fastened to the motor for detecting imbalance.
- The magnet for detecting imbalance is defective or is no longer in the holder.
- The holder is placed such that the magnet is no longer above the hall sensor.
- Electronics (A1) is defective.
- The three rubber/metal bearings on the motor are so damaged that the magnet is no longer above the hall sensor.

7 Settings and queries

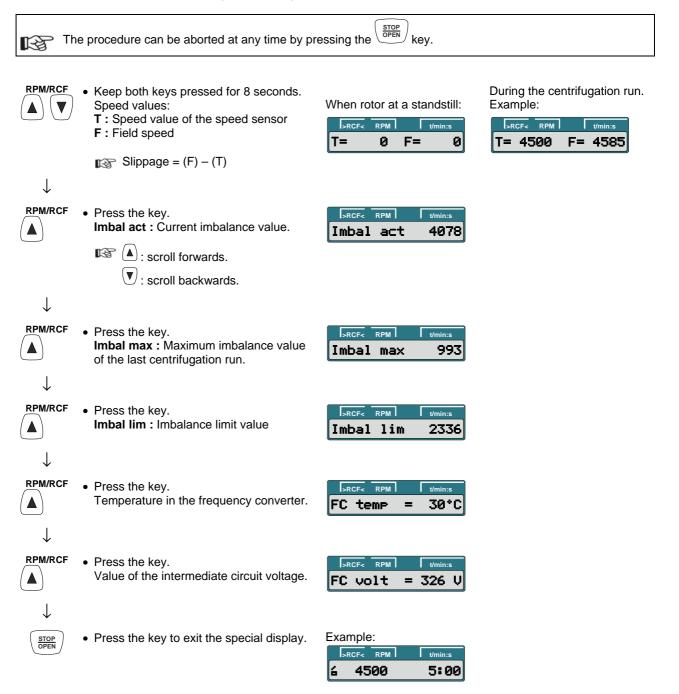

All settings and queries are carried out via the keyboard.

The corresponding menus are selected by pressing keys or key combinations.

7.1 Special displays

- The following system information can be queried:
- Speed values of the speed sensor
- Current imbalance value
- Maximum imbalance value of the last centrifugation run
- Imbalance limit value
- Temperature in the frequency converter
- Value of the intermediate circuit voltage

With the rotor at a standstill and during the centrifugation run, the query can proceed as follows:

7.2 MACHINE MENU

- Query:
- System information (chapter 7.2.1)

Setting:

- Acoustic signal (chapter 7.2.2)
- Automatic unlocking of the lid after the centrifugation run (chapter 7.2.4)
- Automatic switch-off of the background lighting. (chapter 7.2.5)
- Optical signal after ending the centrifugation run (chapter 7.2.3)

- Query:Number of completed
- centrifugation runs (chapter 7.2.6)

Setting:

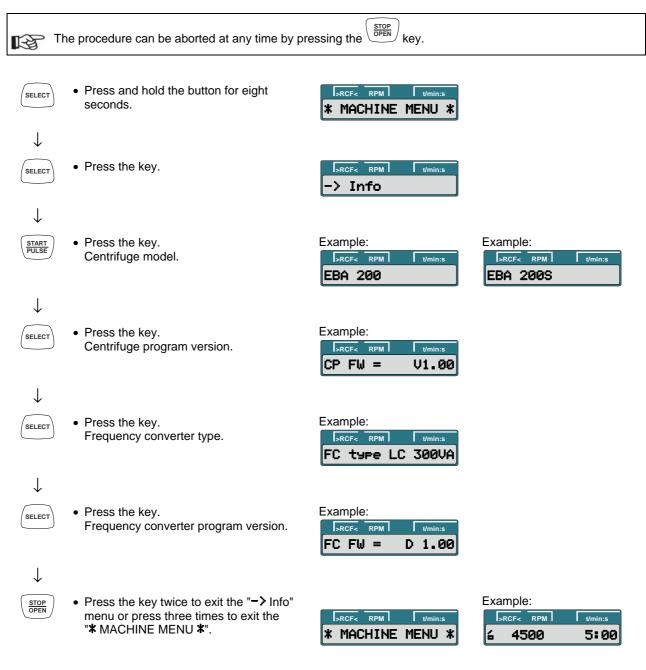

- Hours of operation (chapter 7.2.6)
- Switching the cycle counter on or off and setting the maximum permissible number of run cycles (chapter 7.2.7)
- Resetting the cycle counter to zero (chapter 7.2.8)

7.2.1 Querying system information

The following system information can be queried:

- Centrifuge model
- Centrifuge program version
- Frequency converter type
- Frequency converter program version

With the rotor at a standstill, the query can proceed as follows:

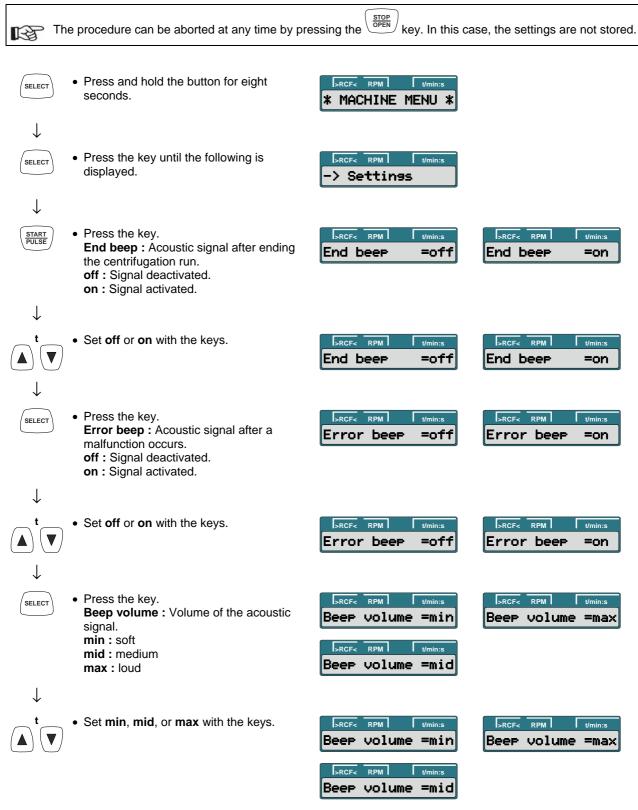

7.2.2 Acoustic signal

The acoustic signal sounds:

- after a malfunction occurs in a 2-second interval.
- after ending the centrifugation run and the rotor is at a standstill in a 30-second interval.

The acoustic signal is ended by pressing any key.

If the rotor is at a standstill, the acoustic signal can be set as follows:

 \downarrow

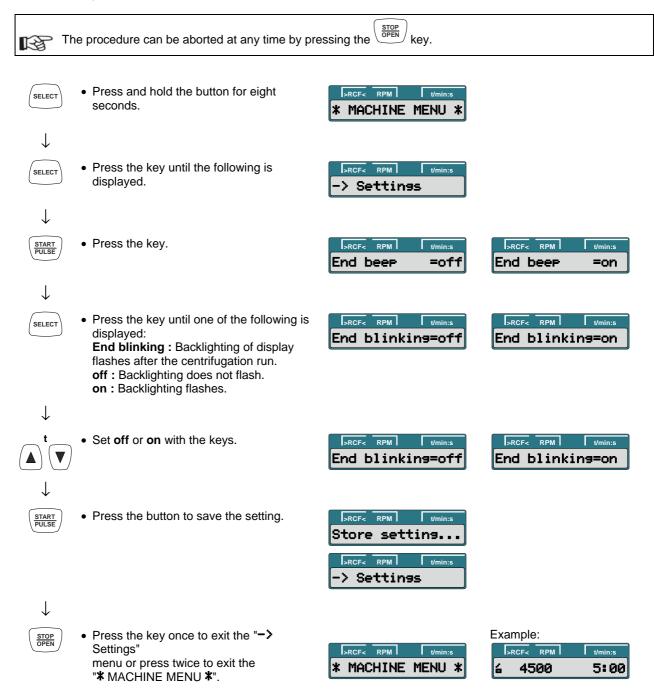

Continued on next page

	 Press the button to save the setting. 	Store setting	-> Settings
STOP OPEN	 Press the key once to exit the "-> Settings" menu or press twice to exit the "* MACHINE MENU *". 	RCF< RPM //min:s * MACHINE MENU *	Example: >RCF< RPM //min:s 4500 5:00

7.2.3 Optical signal after ending the centrifugation run

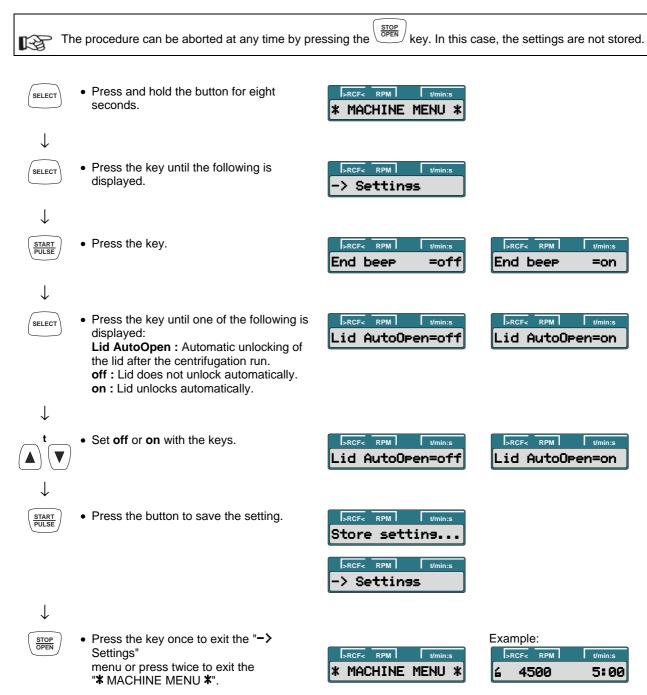

The backlighting of the display flashes after the centrifugation run to visually signalize that the centrifugation run has finished.

The optical signal can be switched on or off when the rotor is at a standstill:

7.2.4 Automatic unlocking of the lid after the centrifugation run

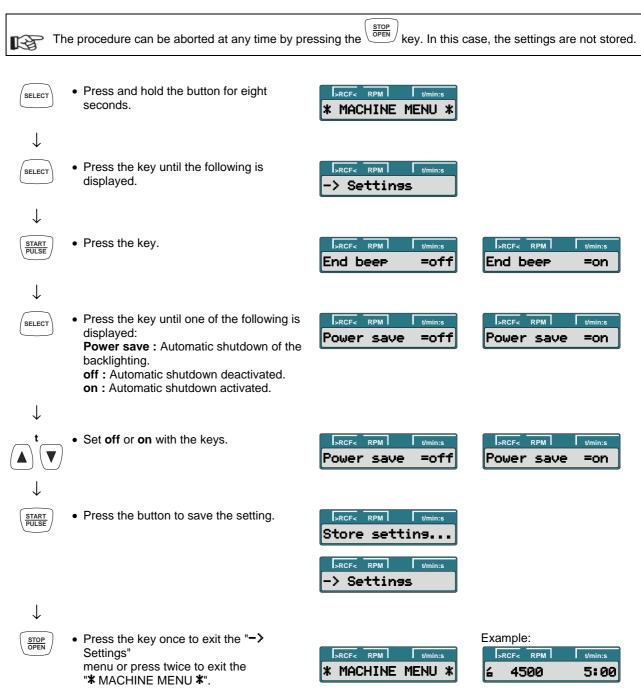

It can be set whether the lid should automatically unlock or not after the centrifugation run. With the rotor at a standstill, this can be set as follows:

7.2.5 Backlighting of the display

To save energy, it can be set that, after a centrifugation run, the backlighting of the display switches off after 2 minutes.

With the rotor at a standstill, this can be set as follows:

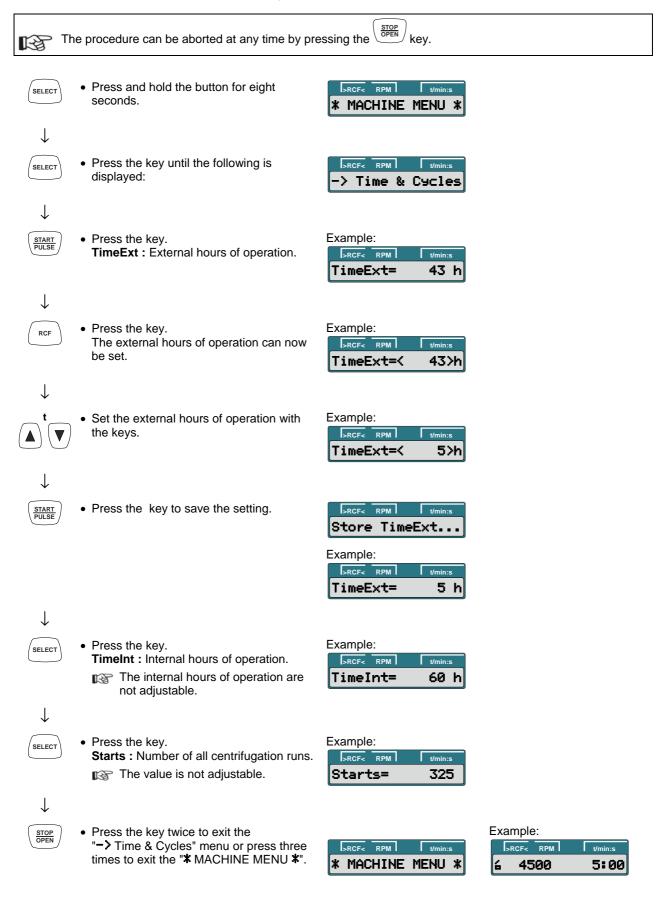

7.2.6 Querying and setting the hours of operation and querying the number of centrifugation runs

The hours of operation are divided into internal and external hours of operation. Internal hours of operation: Total time the device was switched on.

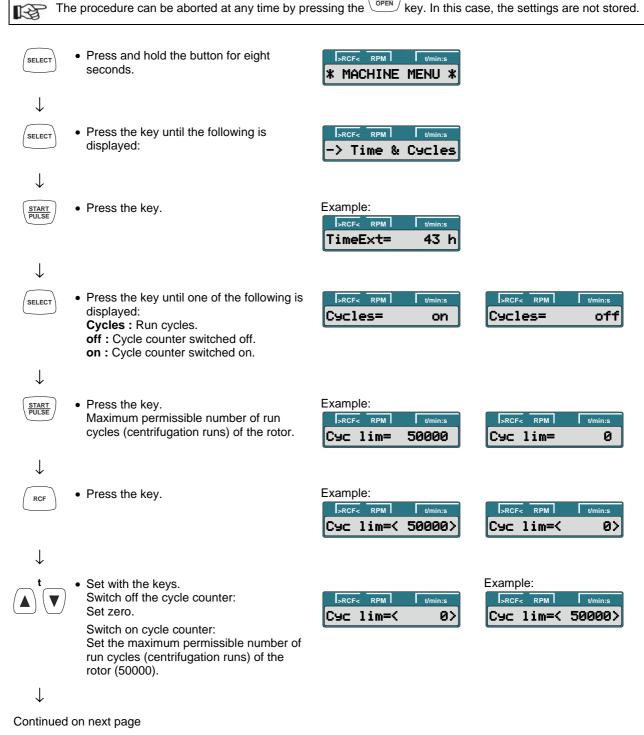

External hours of operation: Total time of the previous centrifugation runs.

With the rotor at a standstill, the query and setting can be carried out as follows :

7.2.7 Switching the cycle counter on or off and setting the maximum permissible number of run cycles

After exchanging the electronics, the cycle counter is switched off. For centrifuges with rotors whose period of use is limited to a certain number of run cycles (centrifugation runs), the cycle counter must be activated and the maximum permissible number of run cycles (centrifugation runs) of the rotor must be set. The rotors in question are labeled with the maximum permissible number of run cycles. For centrifuges with rotors whose period of use is not limited, the cycle counter is not required and should therefore be deactivated. With the rotor at a standstill, the settings can be made as follows:

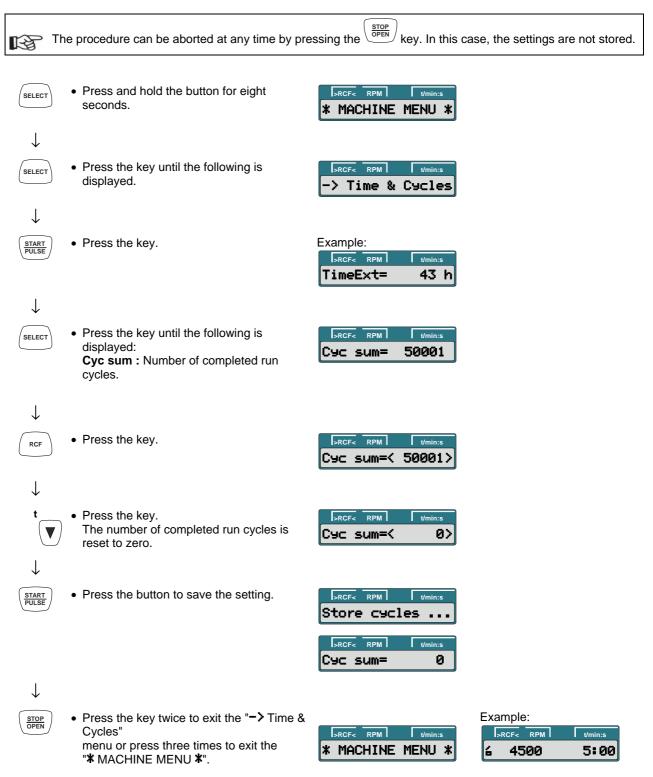

START PULSE	 Press the key to save the setting. 	Store cycles	Store cycles
		RCF RPM Vmin:s Cuc lim= Ø	Example: >RCF< RPM //min:s Cuc lim= 50000
\downarrow			
STOP OPEN	 Press the key. off : Cycle counter switched off. on : Cycle counter switched on. 	RCF RPM Umin:s Cucles= off	SRCF RPM Vmin:s Cycles= on
\downarrow			
STOP OPEN	 Press the key twice to exit the "-> Time & Cycles" menu or press three times to exit the "* MACHINE MENU *". 	RCF- RPM //min:s * MACHINE MENU *	Example: >RCF< RPM //min:s 6 4500 5:00

7.2.8 Resetting the cycle counter to zero

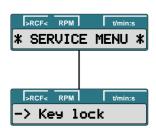

After the rotor has been exchanged, the cycle counter must be reset to zero again.

The cycle counter may only be reset to zero if the rotor has been exchanged for a new rotor first.

With the rotor at a standstill, the cycle counter can be reset as follows:

7.3 SERVICE MENU

Setting:

 Key lock (chapter 7.3.1)

7.3.1 Key lock

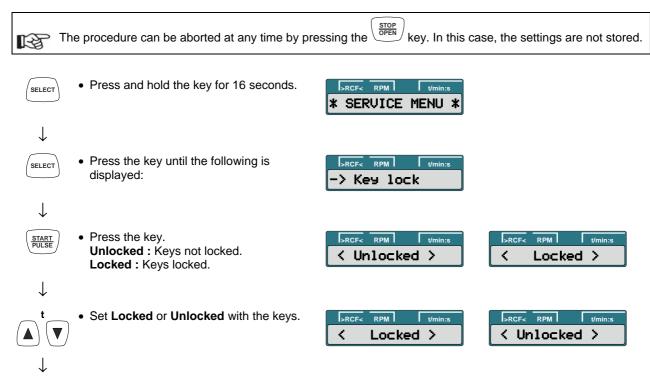

To prevent a change in the centrifugation parameters by unauthorized persons, the following keys can be locked:

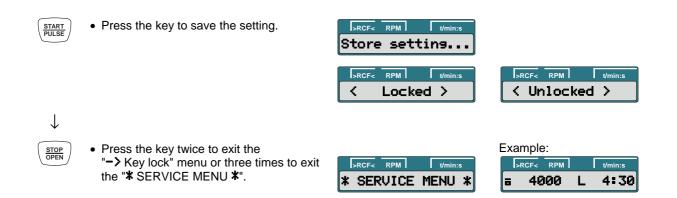

If the keys are locked, it is also no longer possible to carry out short-term centrifugation or an Emergency Stop.

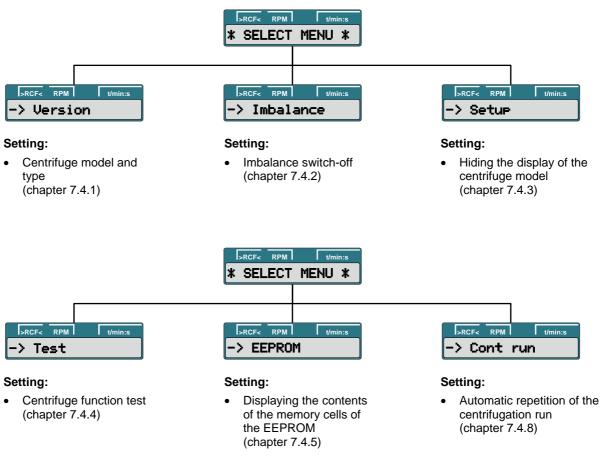

With the rotor at a standstill, the keys can be locked as follows:

Continued on next page

7.4 SELECT MENU

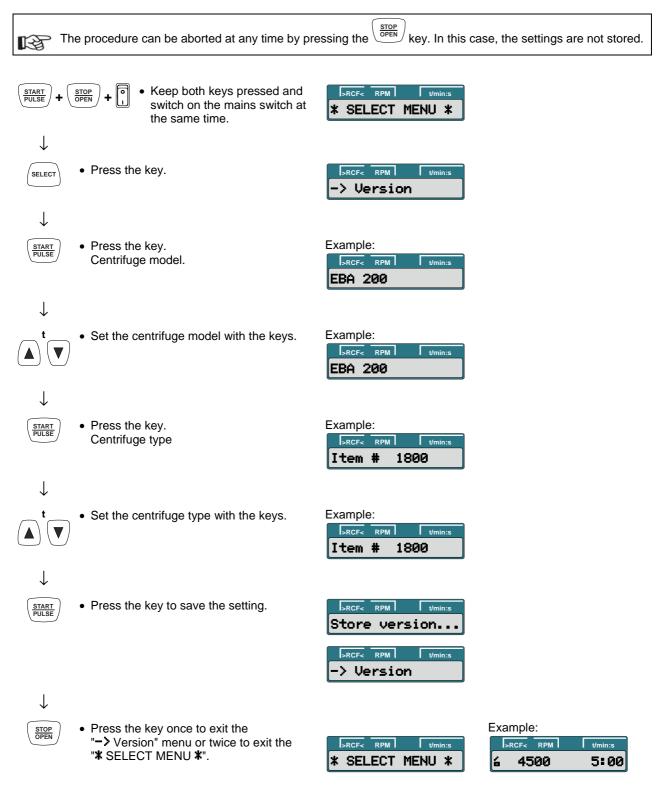

- Delete the centrifugation parameters in the EEPROM (chapter 7.4.6)
- Initializing the EEPROM (chapter 7.4.7)

7.4.1 Setting the centrifuge model and type

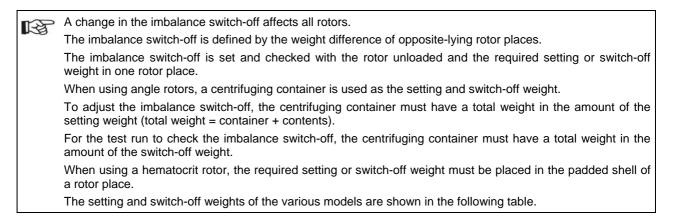

The model and type number of the centrifuge must be set in the program.

The model and type number of the centrifuge are displayed briefly after the device is switched on.

With the rotor at a standstill, the model and type number of the centrifuge can be set as follows:

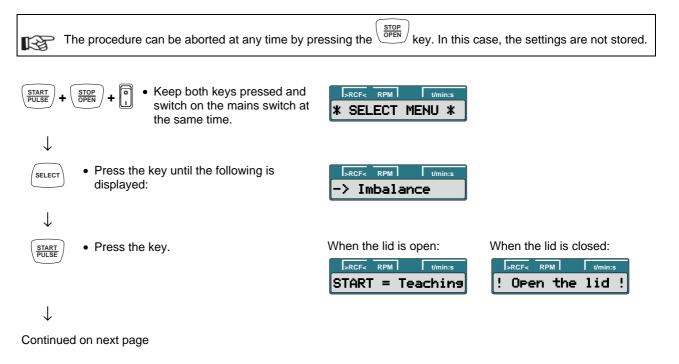

7.4.2 Setting the imbalance switch-off

If there is a weight difference in the amount of the switch-off weight, the motor must shut down during startup.

Weights for setting and chec	eights for setting and checking the imbalance switch-off				
Model	Setting weight in grams	Switch-off weight in grams			
EBA 200, EBA 200 S	7	8			
EBA 200 C	5	6			
HAEMATOKRIT 200	3	4			

The imbalance switch-off can be set as follows:

STOP OPEN

· Only press the key if the following

П	message is displayed.							
	>RCF<	RF	M		t/min:s			
	! Ope	m	the	1	id			

Open	the	lid	!

- If only one test run of the imbalance switch-off is to be carried out, the imbalance setting can be skipped.
 - Press the key. SELECT
 - Afterwards, continue with the section "Carrying out a test run"; see page 37.

	>RCF< RPM t/min:s	
h	START = Test ru	n
	>RCF< RPM t/min:s	
	STOP = Exit	

>RCF< RPM

START = Teaching

t/n

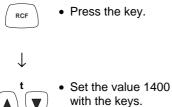

The imbalance switch-off values can R be queried.

• The following values can be queried with the keys: Imbal limit : Imbalance limit value. **BaseVal**: Determined average value. PWM offset : Determined offset value. **Threshold :** Imbalance threshold value.

Example:	
>RCF< RPM	t/min:s
Imbal limit	3240
>RCF< RPM	t/min:s
BaseVal:	4071
>RCF< RPM	t/min:s
PWM offset:	6356
>RCF< RPM	t/min:s
Threshold:	1400

The imbalance threshold value (Threshold) is adjustable. It must be set to 1400.

>RCF<	RPM	t/min:s

Threshold:>1400<

+/

1400

>RCF< RPM

• Press the key to save the setting.	Store values

7.4.3 Hiding the display of the centrifuge model

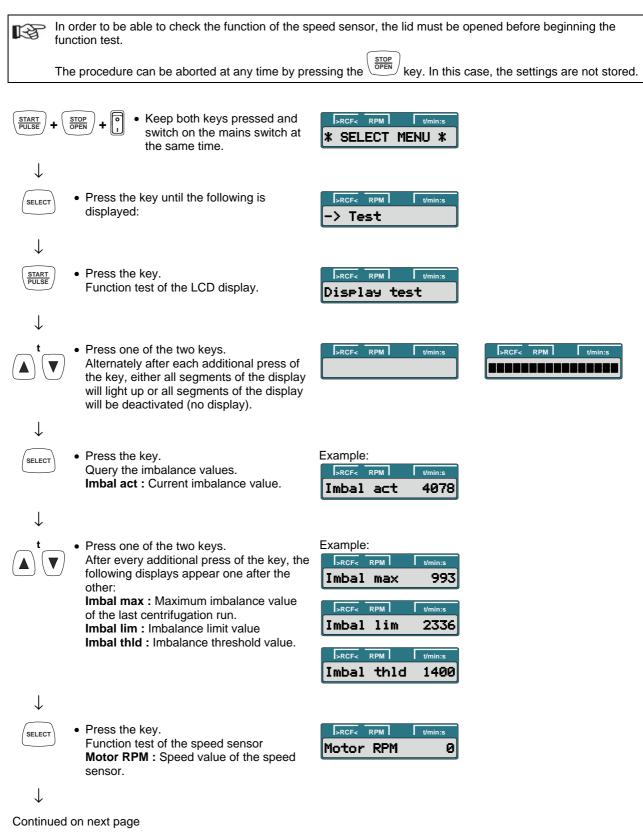

The centrifuge model displayed after switching on the device can be hidden.

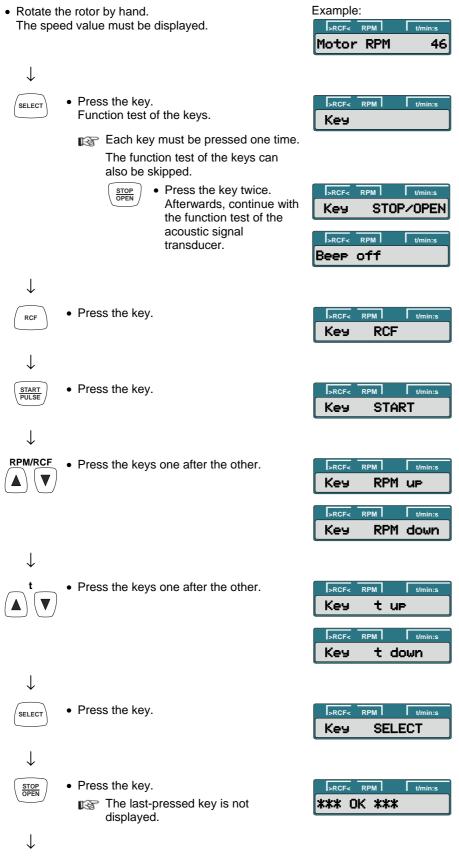

With the rotor at a standstill, the display of the centrifuge model can be hidden as follows:

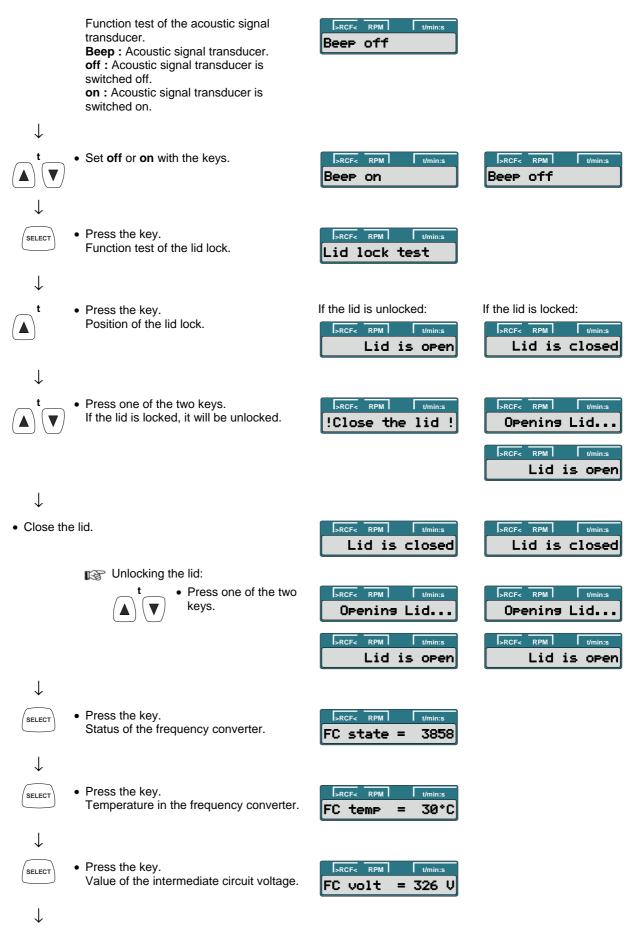

7.4.4 Function test

The individual centrifuge components can be tested for proper function. With the rotor at a standstill, the function test can be carried out as follows:

Continued on next page

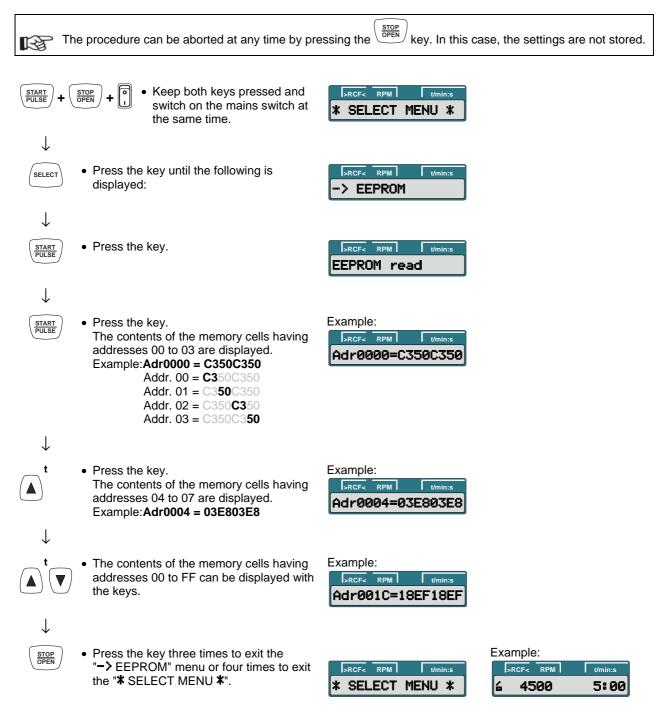

Continued on next page

SELECT	Press the key. Machine version.	Version = 00-10	
\downarrow			
STOP OPEN	 Press the key twice to exit the menu "-> Test" or press it three times to exit the "* SELECT MENU *". 	SELECT MENU *	Example: >RCF< RPM //min:s 4500 5:00

7.4.5 Displaying the contents of the memory cells of the EEPROM

The contents of the EEPROM memory cells can be displayed.

With the rotor at a standstill, the contents of the EEPROM memory cells can be displayed as follows:

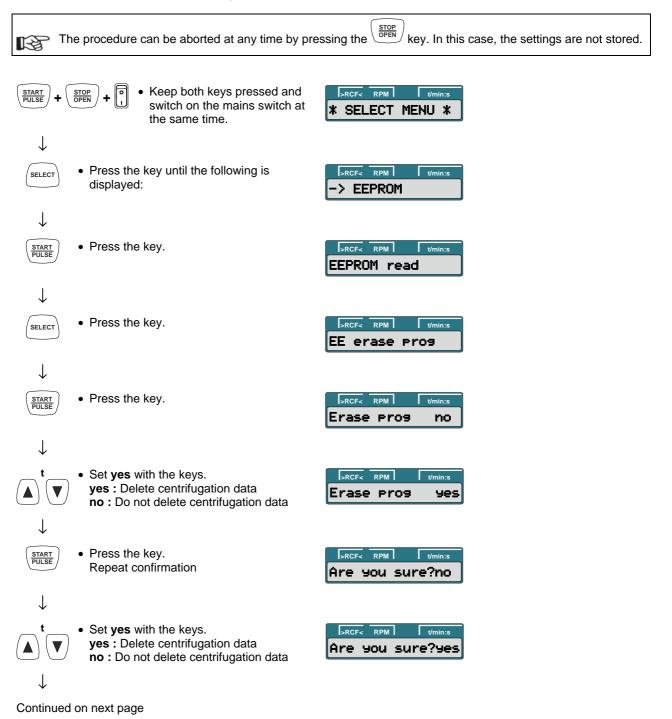

7.4.6 Deleting the centrifugation parameters in the EEPROM

The centrifugation parameters in the EEPROM are reset to their default values.

Centrifugation parameter	Default value	
Runtime	t/min, t/sec	1:00
Speed	RPM	1000
Relative centrifugal force	>RCF<	56
Centrifuging radius	RAD/mm	50
Brake stage	-_DEC	fast

With the rotor at a standstill, the centrifugation parameters can be deleted as follows:

START PULSE	 Press the key. The centrifugation data in the EEPROM are reset to their default values. 	>RCF RPM t/min:s Erasing prog >RCF RPM t/min:s EE erase prog		
\downarrow	- Droop the key twice to exit the		Evennler	
STOP OPEN	 Press the key twice to exit the "-> EEPROM" menu or three times to exit the "* SELECT MENU *". 	SELECT MENU *	Example:	t/min:s

7.4.7 Initializing the EEPROM

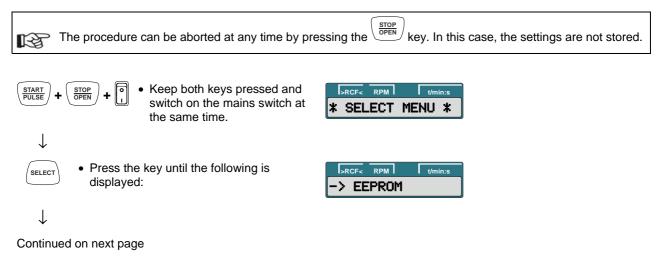

The following parameters/functions are reset to default values in the EEPROM.

Menu	Parameter / function		Default value
	Runtime	t/min, t/sec	1:00
	Speed	RPM	1000
	Relative centrifugal force	>RCF<	56
	Centrifuging radius	RAD/mm	50
	Brake stage	->_DEC	fast
	Acoustic signal after ending the centrifugation run.	End beep	on
	Acoustic signal after a malfunction occurs.	Error beep	on
	Volume of the acoustic signal.	Beep volume	max
* MACHINE MENU *	Automatic unlocking of the lid after the centrifugation	Lid AutoOpen	on
	run		
	Automatic shutdown of the backlighting	Power save	on
	Optical signal after ending the centrifugation run	End blinking	on
* SERVICE MENU *	Locking the keys	Key lock	Unlocked
	Centrifuge model and type number	Version	10
* SELECT MENU *	Imbalance switch-off, limit value	Imbal limit	3500
T SELECT MENU T	Imbalance switch-off, PWM offset value	PWM offset	6500
	Imbalance switch-off, threshold	Threshold	1400

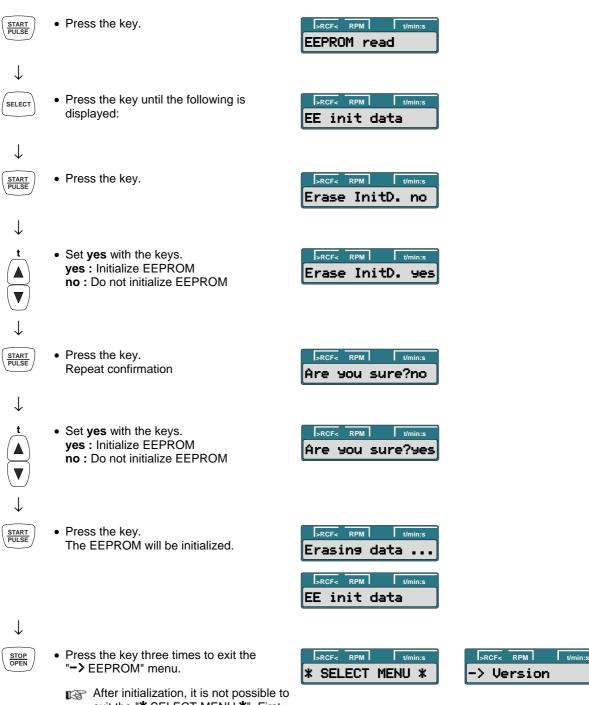

After initializing the EEPROM, it is imperative that the following parameters/functions be set:

- Centrifuge model and type (chapter 7.4.1)
- Imbalance switch-off (see chapter 7.4.2).

With the rotor at a standstill, the EEPROM can be initialized as follows:

I

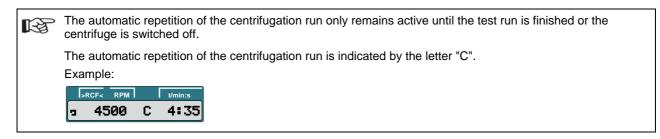

exit the "* SELECT MENU *". First, in the "-> Version" menu, the model and type number of the centrifuge have to be set and then the imbalance switch-off set in the "-> Imbalance" menu.

7.4.8 Automatic repetition of the centrifugation run

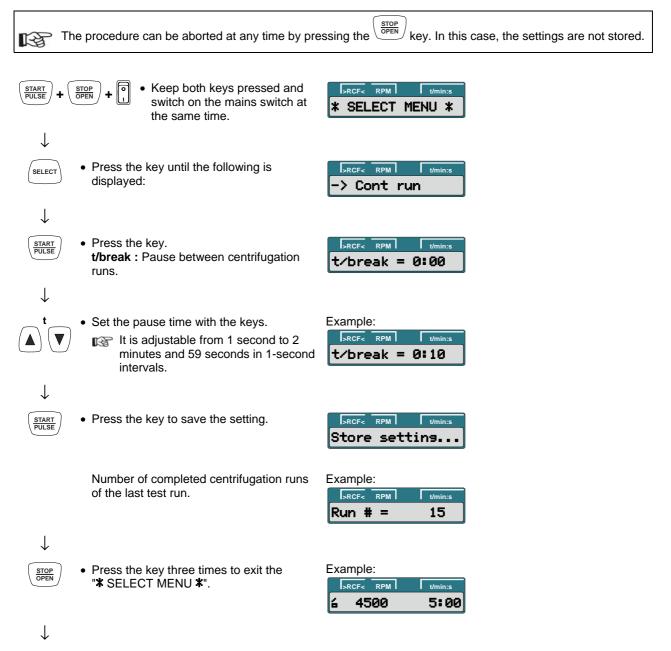

For testing purposes, the automatic repetition of the centrifugation run can be set.

The number of centrifugation runs is counted automatically.

The pause time between centrifugation runs is adjustable.

Carry out the test run with automatic repetition of the centrifugation run as follows:

Continued on next page

• Close the lid.

\downarrow

START PULSE Press the key. The test run with automatic repetition of the centrifugation run will be carried out.

With the rotor at a standstill, between centrifugation runs, the number of already completed centrifugation runs of the test run is briefly displayed.

Then the remaining pause time will be displayed.

>RCF<	RPM	t/min:s

С

t/n

5:00

4:35

Example:

2

>RCF< RPM

4500

4500

>RCF< RPM	t/min:s
Run # =	5

>RCF< RPM	t/min:s
t/break =	0:07

Ending the test run

 \downarrow

• Press the key while the pause time is counting down.

The lid will open automatically.

After the pause time has elapsed, the centrifugation data will be displayed.

Example:

>RCF<	RPM	t/min:s
t/bre	eak =	0:07
>RCF<	RPM	t/min:s
		5:00

8 Functional check after a repair

After a repair a functional check of the unit must be carried out. For functional check a test run with the loaded rotor must be performed.

During the test run the followings must be checked:

- Function of the keys and the display.
- Run-up and slow-down time, max. speed of the rotor. Values see operating instructions chapter "Anhang/Appendix, Rotoren und Zubehör/Rotors and accessories".
- Sample temperature. Values see operating instructions chapter "Anhang/Appendix, Rotoren und Zubehör/Rotors and accessories".
- Imbalance switch-off. Values see chapter "7.4.2".
- Current consumption. Values see chapter "12.3".

After the test run a safety test must be carried out. Check the following values:

٠	Insulation resistance	> 2	MΩ
٠	Protective conductor resistance	< 0.2	Ω
٠	Leakage current	< 3.5	mA *

* limit according to EN 61010-1

A laboratory centrifuge do not belong to those medical appliances which may be tested according to the regulation IEC 60601-1 or corresponding national medical electronic standards. Laboratory centrifuges are classified as laboratory equipment.

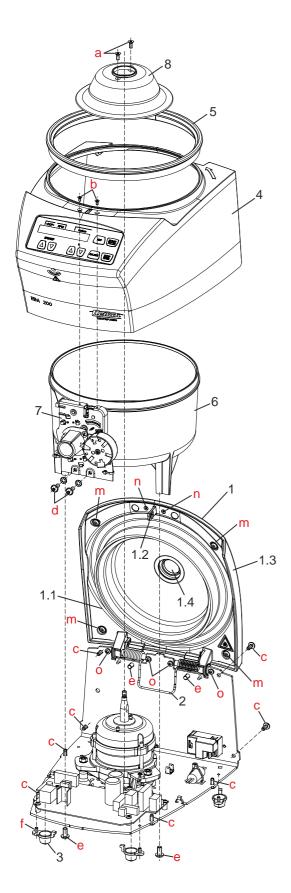

The regulations applying to laboratory equipment are IEC 61010-1 or European standard EN 61010-1.

10 Installing and removing components

Before installing and removing components, the mains switch must be switched off and the centrifuge disconnected from the mains.

10.1 Removing the upper housing part

• Switch on the device.

- Press the VOPEN key to unlock the lid and then open the lid.
- Switch off the mains switch and disconnect the centrifuge from the mains.
- Screw the two fastening screws of the lid lock (pg. 50, Fig. 1, b | pg. 51, Fig. 2, b | pg. 52, Fig. 3, b) out of the upper housing part.
- Screw the four fastening screws each of the upper housing part (pg. 50, Fig. 1, c | pg. 51, Fig. 2, c | pg. 52, Fig. 3, c) out of the base plate and out of the rear side of the device.
- Lift up the upper housing part (pg. 50, Fig. 1, item 4 | pg. 51, Fig. 2, item 4 | pg. 52, Fig. 3, item 4) somewhat and tilt forward.
- Unplug the ribbon cable (plug S601 or S501) from the electronics (A1).
 Plug S601: EBA 200
 - Plug S501: EBA 200 S, HAEMATOKRIT 200
- The upper housing part is installed in the opposite order.
 Make sure that all plugs are plugged in again and all cables are fastened where they should be. For the
 - plug positions, see pg. 60, chapter 12.2.

10.2 Removing the centrifuging chamber

- Remove the upper housing part; see pg. 53, chapter 10.1.
- Remove the rotor.
- Screw the two screws (pg. 50, Fig. 1, a | pg. 51, Fig. 2, a | pg. 52, Fig. 3, a) out of the motor cover and remove the motor cover.
 - The EBA 200 S does not have a motor cover.
- Remove the motor cable fastening from the centrifuging chamber.
- Remove the cable fastening of the speed sensor (B1) from the lid lock cable (for EBA 200 S, HAEMATOKRIT 200 only).
- Unplug plug S104 from the electronics (A1). For the plug position, see pg. 60, chapter 12.2.
- Screw out the 2 fastening screws each of the centrifuging chamber (pg. 50, Fig. 1, e | pg. 51, Fig. 2, e | pg. 52, Fig. 3, e) out of the base plate and out of the rear side of the device.
- Lift up the centrifuging chamber (pg. 50, Fig. 1, item 6 | pg. 51, Fig. 2, item 6 | pg. 52, Fig. 3, item 6) and remove.
- The centrifuging chamber is installed in the opposite order.
 - Make sure that all plugs are plugged in again and all cables are fastened where they should be. For the plug positions, see pg. 60, chapter 12.2.

10.3 Motor (M1) / speed sensor (B1) / rubber/metal bearing

After disconnecting the centrifuge from the mains, wait for at least 2 minutes until the intermediate circuit capacitors of the frequency converter have discharged.

- Remove the centrifuging chamber; see pg. 53, chapter 10.2.
- Remove the cable fastening of the speed sensor (B1) from the base plate (for EBA 200 only).
- Unplug plugs S101 and S602 / S504 from the electronics (A1). For the plug positions, see pg. 60, chapter 12.2.
 Plug S602: EBA 200
 - Plug S504: EBA 200 S, HAEMATOKRIT 200
- Loosen the three fastening nuts of the motor (pg. 50, Fig. 1, h | pg. 51, Fig. 2, h | pg. 52, Fig. 3, h) and remove.
- Unplug the motor's grounding cable and remove the motor (pg. 50, Fig. 1, item 9 | pg. 51, Fig. 2, item 9 | pg. 52, Fig. 3, item 9) from the centrifuge.
- Screw the speed sensor (pg. 50, Fig. 1, item 10 | pg. 51, Fig. 2, item 10 | pg. 52, Fig. 3, item 10) off from the bottom of the motor (two screws for the EBA 200 and three screws for EBA 200 S, HAEMATOKRIT 200, see pg. 50, Fig. 1, j | pg. 51, Fig. 2, j | pg. 52, Fig. 3, j).
- Before installing the motor, check the three rubber/metal bearings (pg. 50, Fig. 1, item 12 | pg. 51, Fig. 2, item 12 | pg. 52, Fig. 3, item 12) for any wear or cracks and replace them, if necessary. If a rubber/metal bearing is damaged, all three rubber/metal bearings have to be replaced. To replace the rubber/metal bearings, screw them out of the base plate.

When installing the rubber/metal bearings, make sure that there is an anti-twist device (pg. 50, Fig. 1, item 13, 14 \mid pg. 51, Fig. 2, item 13, 14 \mid pg. 52, Fig. 3, item 13, 14) on both sides of the rubber/metal bearing in order to prevent it from twisting during installation.

- The anti-twist devices above and below the rubber/metal bearing are different.
 - The rubber/metal bearing, the speed sensor and the motor are installed in the opposite order. Make sure that all plugs are plugged in again and all cables are fastened where they should be. For the
 - plug positions, see pg. 60, chapter 12.2.
 - After installing the motor, the imbalance switch-off must be checked; see pg. 33, chapter 7.4.2.

10.4 Holder with magnet on the motor

- Remove the upper housing part; see pg. 53, chapter 10.1.
- Screw the holder (pg. 50, Fig. 1, item 11 | pg. 51, Fig. 2, item 11 | pg. 52, Fig. 3, item 11) off of the motor.
 The holder is installed in the opposite order.
- The holder must be placed in such a way that the magnet is located directly above the hall sensor.
- After installing the holder, the imbalance switch-off must be checked; see pg. 33, chapter 7.4.2.

10.5 Lid lock (A4)

- Remove the upper housing part; see pg. 53, chapter 10.1.
- Unplug plug S104 from the electronics (A1). For the plug position, see pg. 60, chapter 12.2.
- Remove the cable fastening of the speed sensor (B1) from the lid lock cable (for EBA 200 S, HAEMATOKRIT 200 only).
- Screw the two fastening screws of the lid lock (pg. 50, Fig. 1, d | pg. 51, Fig. 2, d | pg. 52, Fig. 3, d) from the centrifuging chamber.
- Exchange the lid lock (pg. 50, Fig. 1, item 7 | pg. 51, Fig. 2, item 7 | pg. 52, Fig. 3, item 7).
- The lid lock is installed in the opposite order.
 - Before tightening the two fastening screws of the lid lock (pg. 50, Fig. 1, d | pg. 51, Fig. 2, d | pg. 52, Fig. 3, d) make sure that the locking tab on the lid (pg. 50, Fig. 1, item 1.2 | pg. 51, Fig. 2, item 1.2 | pg. 52, Fig. 3, item 1.2), moves centred into the lid lock when the lid is locked, and doesn't scrape on the housing of the lid lock.

Make sure that all plugs are plugged in again and all cables are fastened where they should be. For the plug positions, see pg. 60, chapter 12.2.

10.6 Electronics (A1)

After disconnecting the centrifuge from the mains, wait for at least 2 minutes until the intermediate circuit capacitors of the frequency converter have discharged.

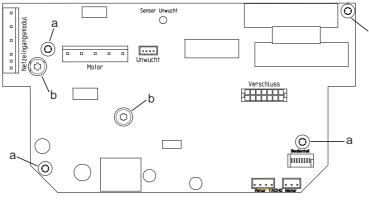

Installation and removal for EBA 200:

- Remove the upper housing part; see pg. 53, chapter 10.1.
- Unplug all plugs from the electronics (pg. 50, Fig. 1, item 18).
- Screw out the four fastening screws from the electronics (pg. 50, Fig. 1, q).
- Exchange the electronics.
- The electronics is installed in the opposite order.
 - Make sure that all plugs are plugged in again and all cables are fastened where they should be. For the plug positions, see pg. 60, chapter 12.2.

Installation and removal for EBA 200 S, HAEMATOKRIT 200:

- Remove the lid lock (A4); see pg. 54, chapter 10.5.
- Unplug all plugs from the electronics (pg. 51, Fig. 2, item 19 | pg. 52, Fig. 3, item 19).
- Screw the six fastening screws out of the electronics (Fig. 4, a, b).
- The two screws (Fig. 4, b) are located on the cooling plate of the electronics (A1).
- Exchange the electronics.
- The electronics is installed in the opposite order.
 - Make sure that all plugs are plugged in again and all cables are fastened where they should be. For the plug positions, see pg. 60, chapter 12.2.

а

10.7 Control panel (A2) / ribbon cable (W1)

- Remove the upper housing part; see pg. 53, chapter 10.1.
- Screw the three fastening screws out of the control panel (pg. 50, Fig. 1, p | pg. 51, Fig. 2, p | pg. 52, Fig. 3, p).
- Lift up the control panel (pg. 50, Fig. 1, item 4.3 | pg. 51, Fig. 2, item 4.3 | pg. 52, Fig. 3, item 4.3) on the side of the fastening screws and pull out of the holder.
- If necessary, unplug the ribbon cable (W1) from the control panel (A2).
- The control panel is installed in the opposite order.
 - Make sure that all plugs are plugged in again and all cables are fastened where they should be. For the plug positions, see pg. 60, chapter 12.2.

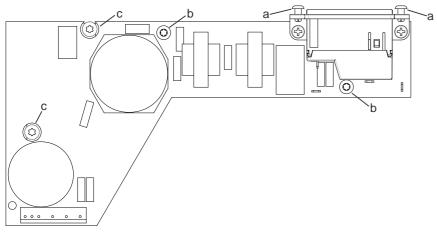

10.8 Electronics (A3)

(for EBA 200 S, HAEMATOKRIT 200 only)

After disconnecting the centrifuge from the mains, wait for at least 2 minutes until the intermediate circuit capacitors of the frequency converter have discharged.

- Remove the centrifuging chamber; see pg. 53, chapter 10.2.
- Unplug all plugs from the electronics (pg. 51, Fig. 2, item 20 | pg. 52, Fig. 3, item 20).
- Remove both body-bound rivets (Fig. 5, c) at the appliance plug.
 - Press the pin of the body-bound rivet from inside out and remove it. Afterwards press the body-bound rivet also from inside out and remove it.
- Screw the four fastening screws out of the electronics (Fig. 5, b, c).
- The two screws (Fig. 5, c) are located on the cooling plate of the electronics (A3).
- Exchange the electronics.
- The electronics is installed in the opposite order.
 - Make sure that all plugs are plugged in again and all cables are fastened where they should be. For the plug positions, see pg. 60, chapter 12.2.

10.9 Appliance plug (A3) (for EBA 200 only)

- Remove the upper housing part; see pg. 53, chapter 10.1.
- Disconnect all cables from the appliance plug (pg. 50, Fig. 1, item 15).
- Remove the two fastening screws from the appliance plug (pg. 50, Fig. 1, k) and remove the appliance plug from the housing.
- Remove the fuse holder (pg. 50, Fig. 1, item 16) from the appliance plug.
- Exchange the appliance plug.
- The appliance plug is installed in the opposite order.
- Make sure that all plugs are plugged in again and all cables are fastened where they should be. For the plug positions, see pg. 60, chapter 12.2.

10.10 Lid / leg spring

- Remove the centrifuging chamber; see pg. 53, chapter 10.2.
- Open the lid as far as it can go (the lid will stand vertically).
- Remove the two fastening screws from each of the hinge pins (pg. 50, Fig. 1, o | pg. 51, Fig. 2, o | pg. 52, Fig. 3, o).
- Remove the lid (pg. 50, Fig. 1, item 1 | pg. 51, Fig. 2, item 1 | pg. 52, Fig. 3, item 1) upward.
- Pull out the two hinge pins and exchange the leg spring.
- The leg spring is installed in the opposite order.
 - Make sure that all plugs are plugged in again and all cables are fastened where they should be. For the plug positions, see pg. 60, chapter 12.2.

10.11 Lid covering / locking tab

- Remove the upper housing part; see pg. 53, chapter 10.1.
- Screw the four fastening screws out of the lid covering (pg. 50, Fig. 1, m | pg. 51, Fig. 2, m | pg. 52, Fig. 3, m). Remove the lid covering (pg. 50, Fig. 1, item 1.3 | pg. 51, Fig. 2, item 1.3 | pg. 52, Fig. 3, item 1.3).
- Screw the two fastening screws out of the locking tab (pg. 50, Fig. 1, n | pg. 51, Fig. 2, n | pg. 52, Fig. 3, n).
- Exchange the locking tab (pg. 50, Fig. 1, item 1.2 | pg. 51, Fig. 2, item 1.2 | pg. 52, Fig. 3, item 1.2).
- The locking tab and the lid covering are installed in the opposite order.
- The locking tab on the lid must move centred into the lid lock when the lid is being locked and must not scrape on the housing of the lid lock.

10.12 Sealing ring

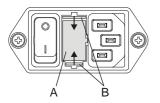

Switch on the device.

- Press the $\left(\frac{\text{STOP}}{\text{OPEN}}\right)$ key to unlock the lid and then open the lid.
- Switch off the mains switch and disconnect the centrifuge from the mains.
- Screw the two fastening screws of the lid lock (pg. 50, Fig. 1, b | pg. 51, Fig. 2, b | pg. 52, Fig. 3, b) out of the upper housing part.
- Screw the four fastening screws each of the upper housing part (pg. 50, Fig. 1, c | pg. 51, Fig. 2, c | pg. 52, Fig. 3, c) out of the base plate and out of the rear side of the device.
- Lift up the upper housing part (pg. 50, Fig. 1, item 4 | pg. 51, Fig. 2, item 4 | pg. 52, Fig. 3, item 4) somewhat and tilt forward.
- Remove the sealing ring (pg. 50, Fig. 1, item 5 | pg. 51, Fig. 2, item 5 | pg. 52, Fig. 3, item 5) from the upper housing part.
- The sealing ring is installed in the opposite order.
 - Insert the sealing ring such that the two venting holes in the sealing ring are located at the rear of the upper R housing part.

11 Change mains input fuses

Switch off the mains switch and separate the device from the mains!

The fuse holder (A) with the mains input fuses is located next to the mains switch.

- Remove the connecting cable from the machine plug socket.
- Press the snap-fit (B) against the fuse holder (A) and remove.
- Exchange defective mains input fuses.

Only use fuses with the rating defined for the type. See the following table.

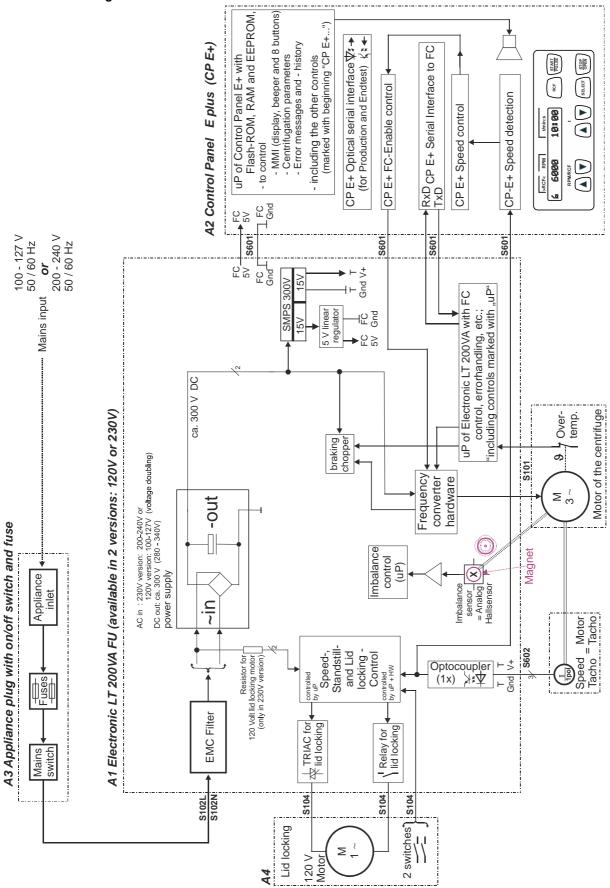

- Reinsert the fuse holder until the snap-fit clicks shut.
- Reconnect the device to the mains supply.

Model	Туре	Fuse	Order no.
EBA 200	1800	T 1,6 AH/250V	E891
EBA 200	1800-01	T 3,15 AH/250V	E997

12.3 Technical specifications

12.3.1 Technical specifications EBA 200 / EBA 200 S

Manufacturer	Andreas Hettich GmbH & Co. KG			
Manufacturer	D-78532 Tuttlingen			
Model	EBA 200 EBA 200 S		200 S	
Туре	1800	1800-01	1802	1802-01
Mains voltage (± 10%)	200 - 240 V 1~	100 - 127 V 1~	200 - 240 V 1~	100 - 127 V 1~
Mains frequency	50 - 60 Hz-	50 - 60 Hz	50 - 60 Hz-	50 - 60 Hz
Connected load	100 VA	100 VA	160 VA	160 VA
Current consumption	0.5 A	1.0 A	0.75 A	1.5 A
Max. capacity			5 ml	
Allowed density		1.2 k	g/dm ³	
Speed (RPM)	60	00	80	00
Force (RCF)	34	61	6153	
Kinetic energy	750	Nm	1750 Nm	
Obligatory inspection (BGR 500)	no			
Ambient conditions (EN / IEC 61010-1)				
 Set-up site 	Indoors only			
– Altitude	Up to 2000 m above sea level			
 Ambient temperature 	2°C to 40°C			
– Humidity	Maximum relative humidity 80% for temperatures up to 31°C, linearly decreasing to 50% relative humidity at 40°C.			
 Excess-voltage category (IEC 60364-4-443) 	Ш			
 Pollution degree 	2			
Device protection class	Ι			
	Not suitable for use in explosion-endangered areas.			
EMC				
 Emitted interference, Interference immunity 	EN / IEC 61326-1, Class B	FCC Class B	EN / IEC 61326-1, Class B	FCC Class B
Noise level (dependent on rotor)	≤ 50 dB(A)		≤ 55 dB(A)	
Dimensions				
– Width	261 mm			
– Depth	353 mm			
– Height	228 mm			
Weight	approx. 9 kg approx. 10 kg		. 10 kg
